La Sal - Snowball

1979 Annual Progress Report

The Beaver Shaft surface facilities were completed by early 1979 with ore and some waste being shipped during the year. Ore pads for various grade were constructed nearby. A waste dump site is planned for construction in 1980. Minor changes took place at the La Sal and Snowball portals including mostly waste dump expansion. Three new ventilation shafts were drilled and are shown on the 500' scale map. Additional ventilation sites are planned for the future. More accurate site maps will be available for the 1980 report. No reclamation has taken place except for the reclaiming of exploration drill holes which are reclaimed according to Utah State laws.
